IN THE CLAIMS

Please amend the claims as follows:

1. (original) Method of visualizing a pointer during interaction of the pointer with an image, the pointer being controllable by a user, the method comprising:

moving the pointer to a first position within the image by the user;

displaying the pointer corresponding to an interaction mode related to the first position within the image;

selecting the interaction mode;

moving the pointer to a second position within the image by the user while performing the selected interaction mode upon the image; and

hiding the pointer during moving the pointer to the second position within the image.

2. (original) Method according to claim 1, wherein the image comprises a region of interest and the step of hiding the pointer comprises hiding the pointer within the region of interest during moving the pointer to the second position.

- 3. (currently amended) Method according to claim 1-or-2, the method further comprising displaying the pointer during moving the pointer to the second position upon request by the user.
- 4. (original) System (500) for visualizing a pointer during interaction of the pointer with an image, the pointer being controllable by a user, the system comprising:
- a mover (502) for moving the pointer to a first position within the image by the user;
- a displayer (504) for displaying the pointer corresponding to an interaction mode related to the first position within the image;
 - a selector (506) for selecting the interaction mode;
- a mover (502) for moving the pointer to a second position within the image by the user while performing the selected interaction mode upon the image; and
- a hider (508) for hiding the pointer during moving the pointer to the second position within the image.
- 5. (original) System (500) according to claim 4, wherein the image comprises a region of interest and the hider (508) is arranged to hide the pointer within the region of interest during moving the pointer to the second position.

- 6. (currently amended) System (500) according to claim 4 or 5, wherein the displayer (504) is further arranged to display the pointer during moving the pointer to the second position.
- 7. (currently amended) Computer program product designed to perform the method according to any of the claims 1 to 3 claim 1.
- 8. (currently amended) Computer readable medium having stored thereon instructions for causing one or more processing units to perform the method according to any of the claims 1 to 3 claim 1.
- 9. (currently amended) An imaging diagnostic apparatus for carrying out the method according to any of the claims 1 to 3claim 1.
